"Roles of Armadillo, a Drosophila catenin, during central nervous system development.";
Curr. Biol. 8:622-632(1998).
-1- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.
THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE SORTING OF HETEROGENEOUS CELL TYPES. MAY ASSOCIATE WITH ARM NEURAL ISOFORM AND PARTICIPATE IN THE TRANSMISSION OF DEVELOPMENTAL
                                                                           Drosophila melanogaster (Fruit fly).

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN (POTENTIAL).
TISSUE SPECIFICITY: IN THE EMBRYO, THE PROTEIN FIRST APPEARS IN
THE MESODERM AT STAGE 9 AND IS PRESENT IN THE MYOBLASTS AND MUSCLE
FIBERS BY STAGE 12 AND STAGE 14, RESPECTIVELY. AT STAGE 12 THE
PROTEIN IS ALSO LOCATED IN THE AXONS OF THE ENTIRE CNS, BUT NOT IN
THE GLIAL CELLS. IN THIEN INSTAFT LARVAE PROTEIN IS EXPRESSED IN
THE CNS NEUROPLIE, PHOTORECEPTOR AXONS AND PRECURSORS OF ADULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PROSITE; PS00022; BGF_1; 3.

- FUNCTION: CONTROL OF TOPOLOGICAL STATES OF DNA BY TRANSIENT
BREAKAGE AND SUBSEQUENT REJOINING OF DNA STRANDS. T4 TOPOISOMERASE
MAKES DOUBLE-STRAND BREAKS.
-- CATALYTIC ACTIVITY: ATP-DEPENDENT BREAKAGE, PASSAGE AND REJOINING
OF DOUBLE-STRANDED DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             OF DOUBLE-STRANDED DNA.
SUBUNIT: THIS IS ONE OF THE 3 SUBUNITS OF T4-DNA TOPOISOMERASE.
SIMILARITY: TO THE PROKARYOTIC GYRASE SUBUNIT A AND TO EUKARYOTIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE OF 1-46 FROM N.A.
